## DETAILED ACTION

### ***Claim Rejections - 35 USC § 103***

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1, 2, and 5-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Okamura et al. (5,734,205) in view of Ker et al. (6,002,568)

Okamura et al. disclose the claimed invention except for use of LVTSCR as a switching element. Ker et al. teach replacing SCR with LVTSCR. Okamura et al. discloses a power supply using batteries undergoing great voltage variation in Figs. 5-10. One or more accumulation capacitor (C11- C1n, C21- C2n), switching elements (S1, S2 and S3), capacitor in parallel during charging cycle and in series during a discharging cycle (see col. 4, lines 3-12), clock circuit (B), increased output voltage (see col. 2, lines 32-41) and switching elements may be MOSFETs (Col. 7, lines 45-45). Ker et al. teach replacing an SCR with LVTSCR (low voltage triggering SCR's) is an equivalent structure known in the art (Col. 4, lines 60-62). Therefore, because these two SCRs were art recognized equivalents at the time the invention was made, one of ordinary skill in the art would have found it obvious to substitute the SCR of Okamura et al. for the LVTSCR of Ker et al. in order to effectively protect the circuit by lowering the trigger voltage.

***Allowable Subject Matter***

3. Claims 3, 4 and 11 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

4. The following is a statement of reasons for the indication of allowable subject matter: None of the cited prior art disclose or teach a charge pump with two LVTSCR and a commutator separating the accumulation capacitor and output capacitor.

***Response to Arguments***

5. Applicant's arguments with respect to claims 1-11 have been considered but are moot in view of the new ground(s) of rejection.

***Conclusion***

6. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of

the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
